Conservatories

Dimensions and Photos

Print these guidelines if you would like to send us dimensions for a design. Or call if you want it faxed or e-mailed. Follow the steps described below or you can call us for assistance at 773.506.8000.

The first step is to determine a location and some basic dimensions.

Example: dimensions between the underside of the second floor window sill to the finished floor level (FFL) as shown in the photo above, or the overall width of a location.

Please provide via e-mail or regular mail:

- 1) Some clear photos of all sides of your house or plans (for new homes or renovations)
- 2) Desired location for the conservatory
- 3) An idea of the minimum floor space that you would like
- 4) Key heights and widths as shown in the sample above

Do not worry about precise dimensions, but be sure to use a common reference point such as the Finished Floor Level (FFL) of the adjacent room.
